PROGRAM

EARLY BARRETT NEOPLASIA

How to Treat? How to Train?

Wednesday, June 29, 2022 | Hybrid

WHY JOIN US?

Prepare to develop your understanding of Barrett's Neoplasia and discover how technology is altering the ways in which we manage this complex condition.

Barrett esophagus is probably the most relevant upper GI disorder in the Western world.

This symposium will highlight some of the hottest new developments in diagnostic and therapeutic endoscopy in this area. There are new classification systems in order to make the endoscopic terminology universal and to help us to compare the results of diagnostic tests and therapeutic measures.

Among the treatment options, cryotherapy is the new kid on the block, and differential indications are just being developed.

And finally, training in endoscopists has been realized as being vital to improve their diagnostic and treatment abilities on a broad scale in order to finally improve patient outcomes.

Learn about all these facts from a renowned group of international Barrett experts, moderated by Amrita Sethi and Horst Neuhaus
